Denison College provides an online resource for students to maximise their class performance, catch up, consolidate or get ahead. In the 2009 awards for Western Region, the Director General recognised the standard of excellence of the site.

While the site has been set up to support staff and students at the two campuses of Denison College, other schools subscribe to access the resources available.

Moodle is an open-source Learning Management System. The Denison College Moodle site: [http://web3.bathurst-h.schools.nsw.edu.au/moodle/](http://web3.bathurst-h.schools.nsw.edu.au/moodle/) is primarily a site for students and teachers, although others can explore the courses available.

The courses on offer include Basic Skills courses for Stages 2 and 3 and courses for Stages 4, 5 and 6, such as Physics and VET courses. Some schools use the hosted area of the site to develop courses specifically for their own needs.

‘Virtual Faculties’ facilitate communication, support and collaboration for teachers who are geographically isolated.

Subscription costs are very reasonable and can be found under ‘Help’ on the homepage. For further information, contact the College Principal, Craig Petersen.
